**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10 and 26-30, drawn to an emissive polymer layer and an organic light emitting diode, classified in class 428, subclass 690.
  - II. Claims 11-19, drawn to a method to produce a particular one of at least one polymer chain of an emissive polymer layer, classified in class 252, subclass 301.35.
  - III. Claims 20-25, drawn to a method to emit visible light through an emissive layer, classified in class 313, subclass 506.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, an organic light emitting diode can have an emissive layer with a different polymer chain.
- Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed

Art Unit: 1774

can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, an emissive layer used to emit light in the organic light emitting diode can have a different polymer chain or different compound and have a different color emission.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the method of making a polymer chain is different than the method to emit visible light. The polymer chain can be used in the emissive layer or it can be used as a separate product for different means.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Thomas George on 8/10/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Camie S. Thompson whose telephone number is (571) 272-1530.
